CEOdata cheatsheet

Xavier Fernández-i-Marín

May 17, 2023

1 Get survey data

CEOdata()

Barometer compilation since 2014
```
CEOdata()
```

Barometer compilation before 2014
```
CEOdata(kind = "barometer_until_2013")
```

Specific study
```
CEOdata(reo = "764")
```

Temporal restriction
Only applies to "kind ='barometer'" or "kind ='barometer_until_2013'"
```
CEOdata(date_start = "2019-01-01", date_end = "2019-12-31")
```

haven/SPSS labels
By default CEOdata() uses pure-R factors. To use the raw format as marked in the original SPSS files, use:
```
CEOdata(raw = TRUE)
```

2 Meta-data: get and inspect surveys

CEOmeta()

All available CEO studies
```
CEOmeta()
```

Meta-data for a specific study
```
CEOmeta(reo = "746")
```

Search within metadata
```
CEOmeta(search = "Medi Ambient")
```

Temporal restriction
```
CEOmeta(date_start = "2019-01-01", date_end = "2019-12-31")
```

Open a browser with the CEO website
```
CEOmeta(reo = "746", browse = TRUE)
```

Studies with microdata available
```
CEOmeta() |>
filter(microdata_available)
```

3 Variable labels and values

CEOsearch()

Get variable labels
```
CEOsearch(d)
```

Get value labels
```
CEOsearch(d, where = "values")
```

Search for specific keywords within variable labels
```
CEOsearch(d, keyword = "Edat")
```

Translate to English
```
CEOsearch(d, keyword = "Edat", translate = TRUE)
```
